INSARAG Coordination & Management System Training Session

Online Team Training Session

INSERT DATE

Survey123 for ArcGIS

Explorer for ArcGIS

What is the INSARAG Coordination Manangement System?

Complex USAR operations result in increased workload. The INSARAG Coordination and Management System (ICMS) offers a standardised and systematic approach to collect and report information at all levels in line with USAR Coordination Methodology;

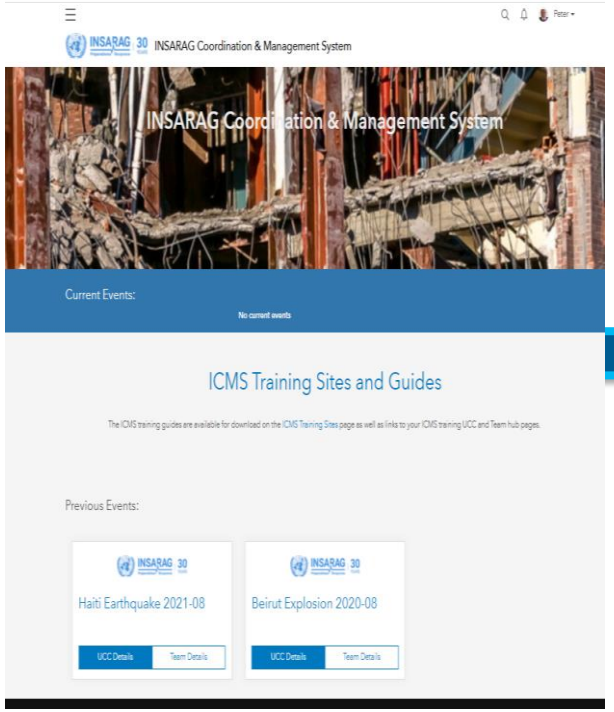
- The INSARAG Coordination Management System is of a suite of applications that combine to form an effective coordination system during a response

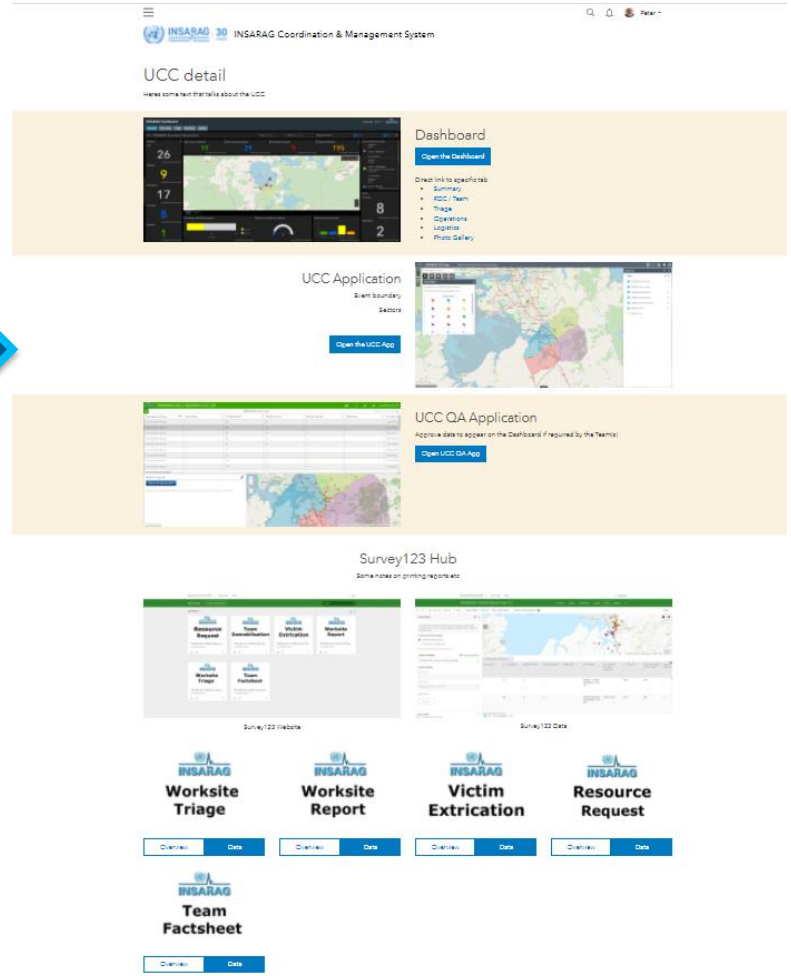
- The system can be accessed through the INSARAG HUB, which is a common landing page that provides access to events and training material. During deployments, a link to the HUB will be posted on the VO

- Data can be collected using two key applications for mobile devices, or online systems, and is then displayed on an Operations Dashboard.

The aim of this presentation is to guide you on submitting data to the Dashboard using the Survey123 Application.

The ICMS suite of applications





Mobile Applications

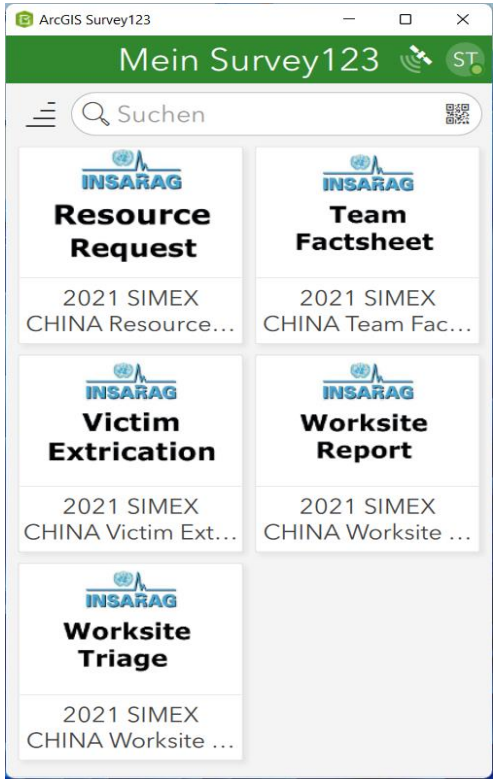
INSARAG HUB

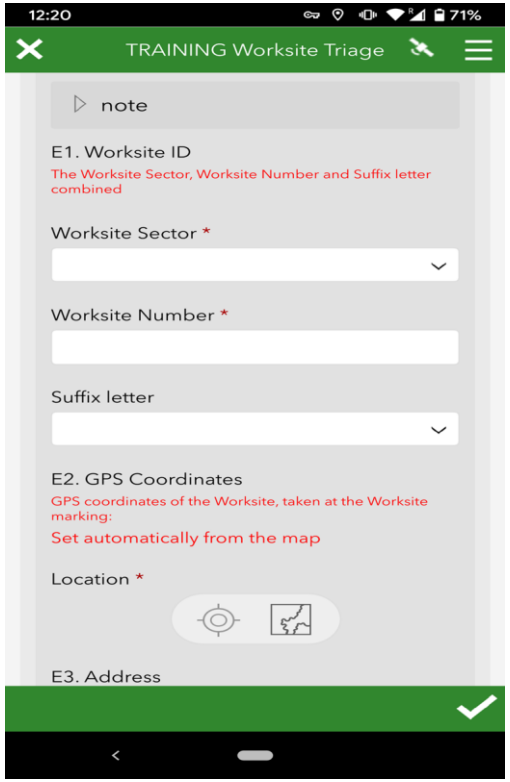
Survey123 for ArcGis (app)

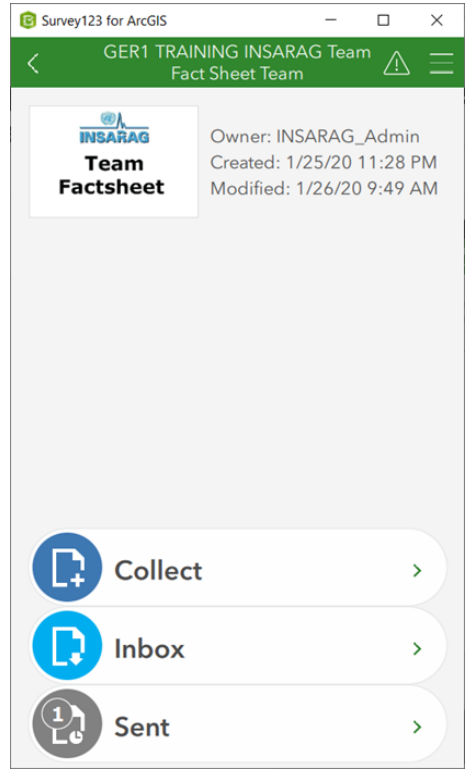
Survey123 allows users in the field to collect data on a mobile device

Survey 123 is a digital replacement for paper forms. Data can be collected, and that information is then displayed on a central dashboard where decision makers can use it, to make more informed decisions.

The Survey123 app can be downloaded directly to your device





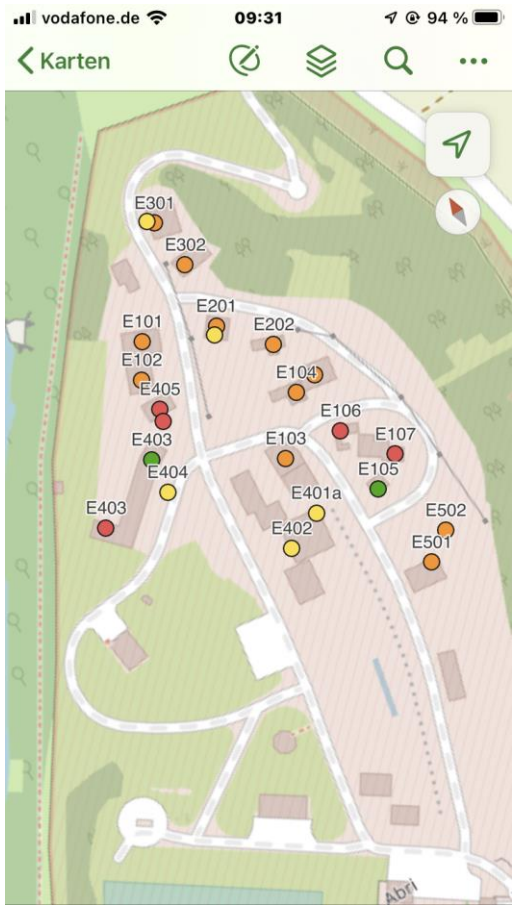


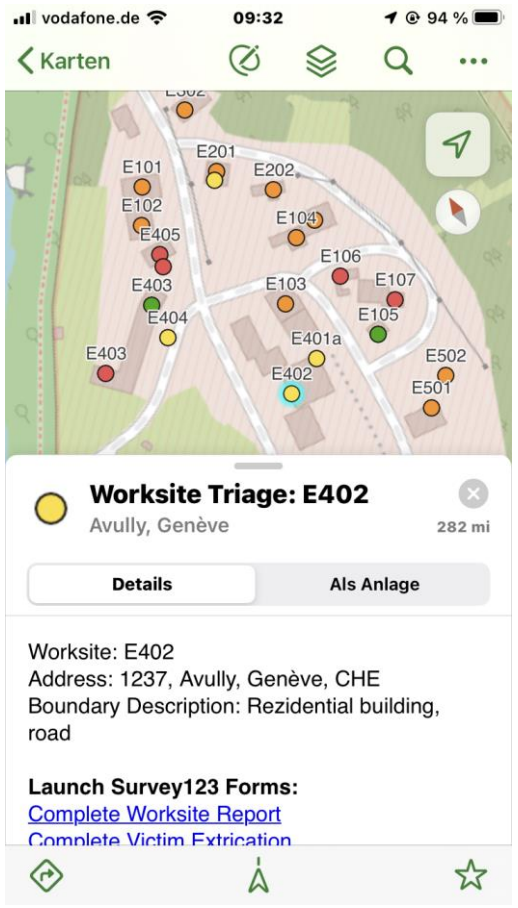
Explorer For ArcGis (app)

Explorer is an addition for worksite reports and victim extrication forms

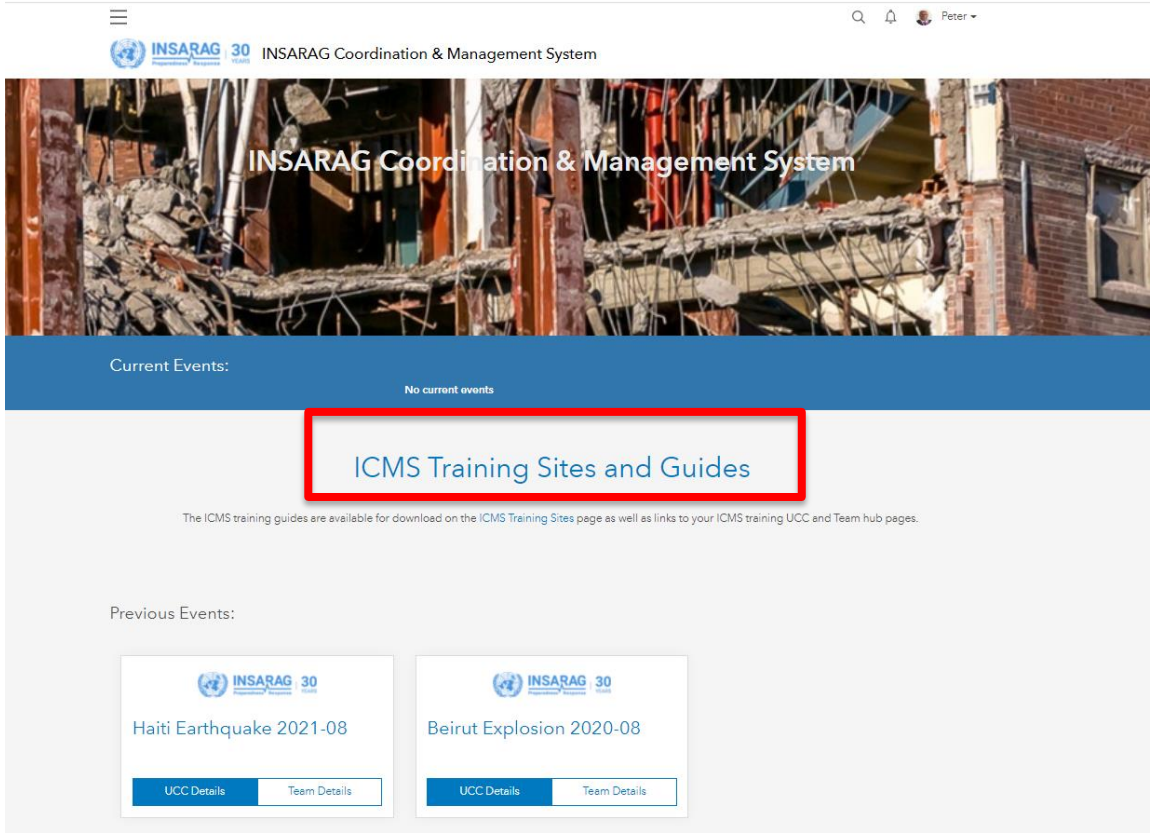
Explorer is an app that allows users to see a map of the deployment area, and the worksites that have been identified. Explorer also links with Survey123 and allows users in the field to view already entered information.

This app can be used to retrieve partially pre-popuilated worksite report, victim extrication and recourses request forms





Access to the ICMS HUB



All teams have been issued unique Log-on details and passwords by the Information Management Working Group.

Below the ICMS Training and guides link you can find the Mission links

Access to the ICMS HUB and both applications

Use the account details below to log into your accounts

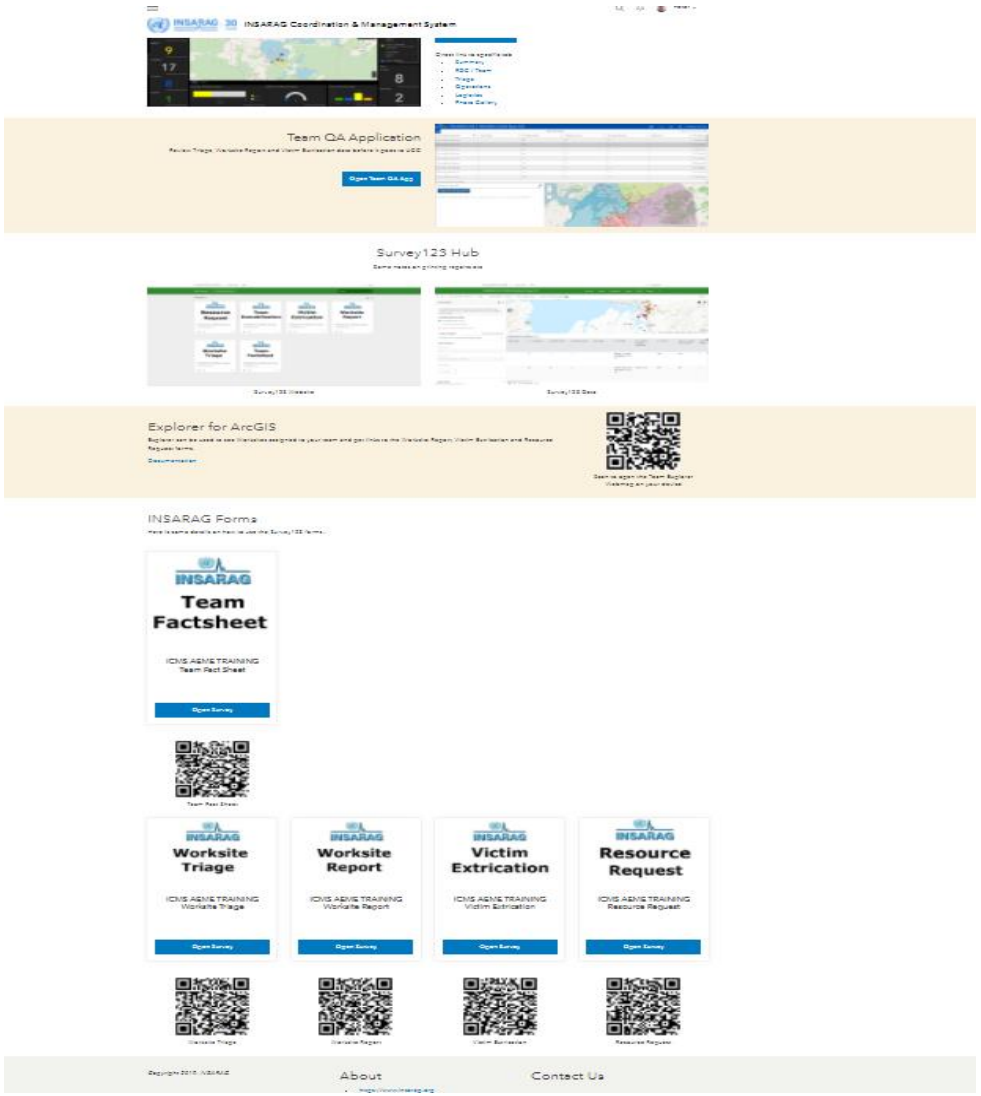
https://icms-insarag.hub.arcgis.com

Login with your Team Account

Username:

Password:

ICMS Team HUB



Once you are logged into your team training account, you will see the options to access the different elements of the system as shown opposite;

The ICMS Operations Dashboard

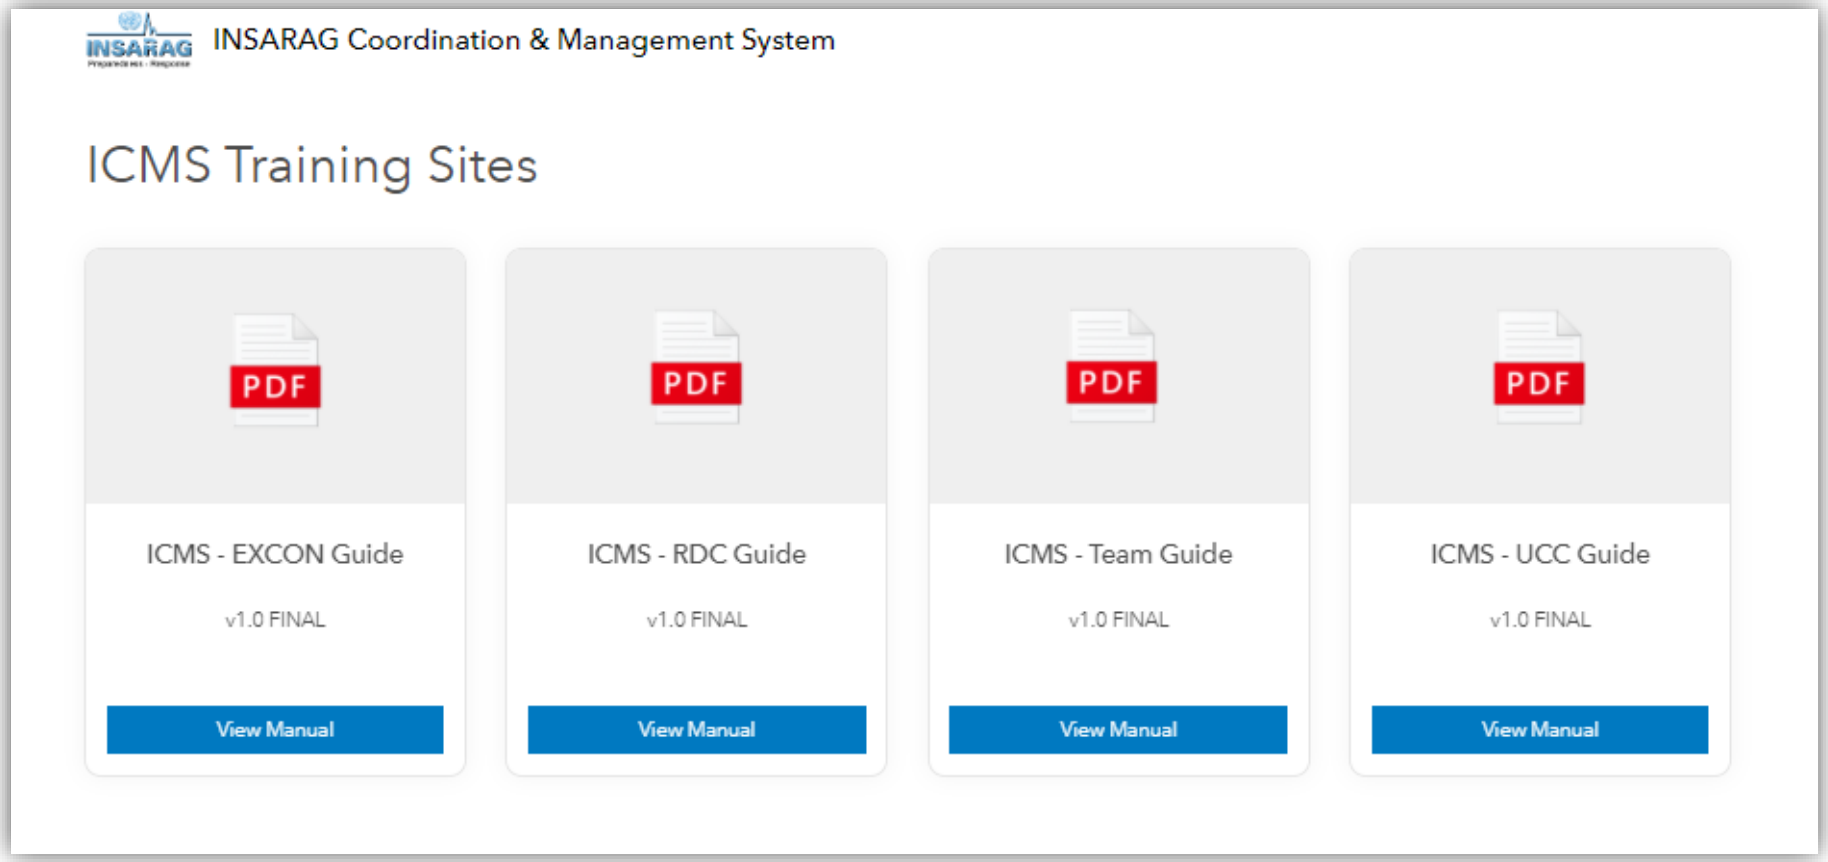
The QA application

The Survey123 Hub

and

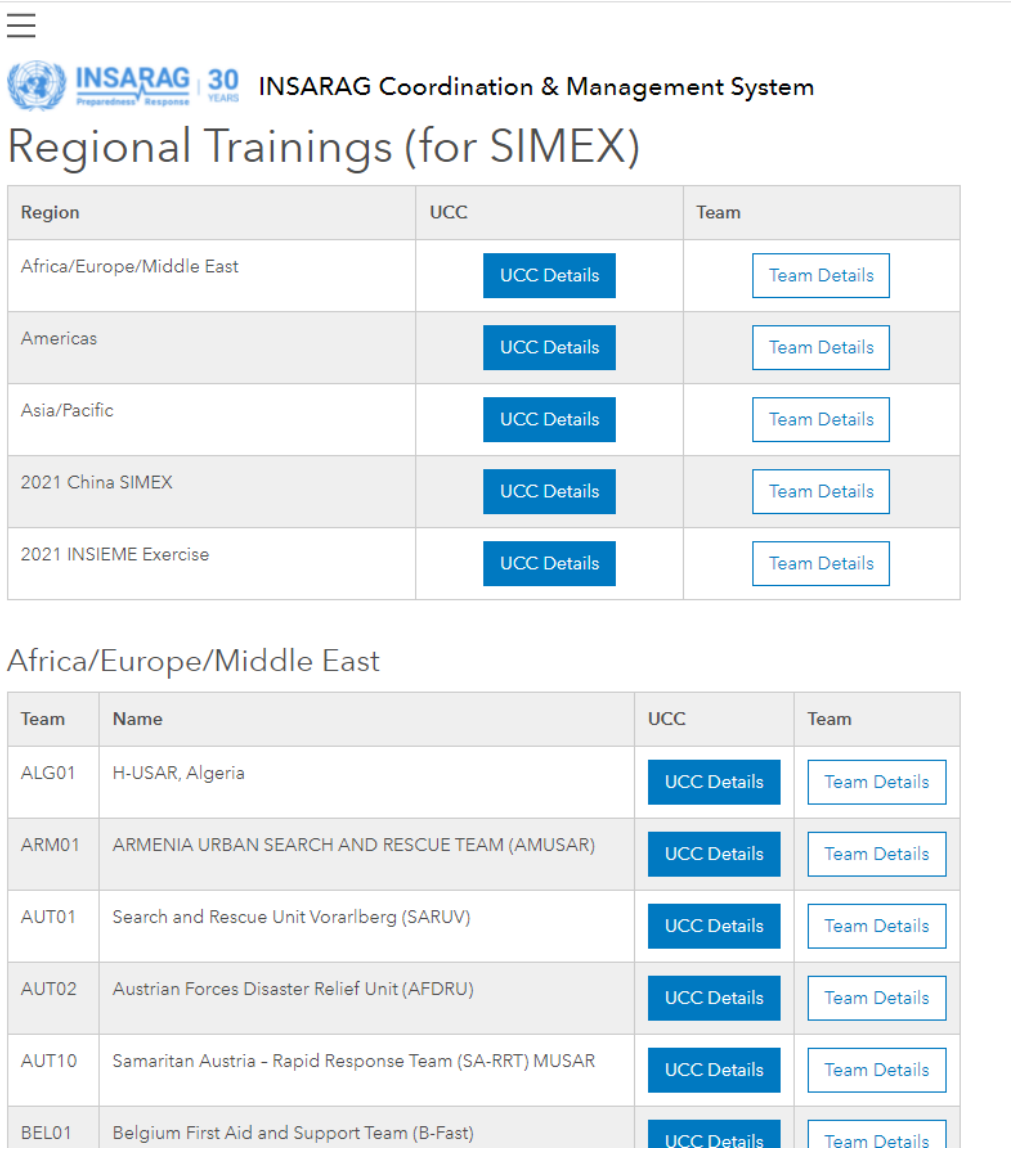
QR codes for the Explorer application, and different INSARAG forms within the Survey123 app.

ICMS Training Material



Available within the Hub at https://icms-insarag.hub.arcgis.com and www.insarag.org

ICMS Training Sites



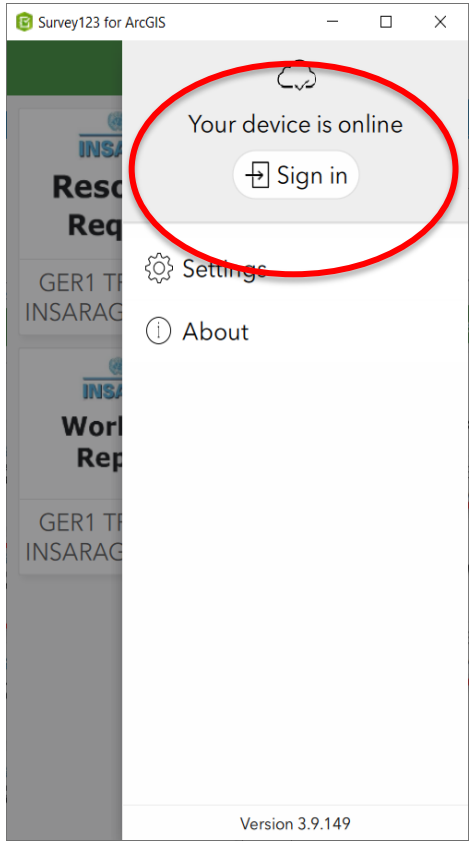
Below the training guides on the Hub, are training areas for all teams

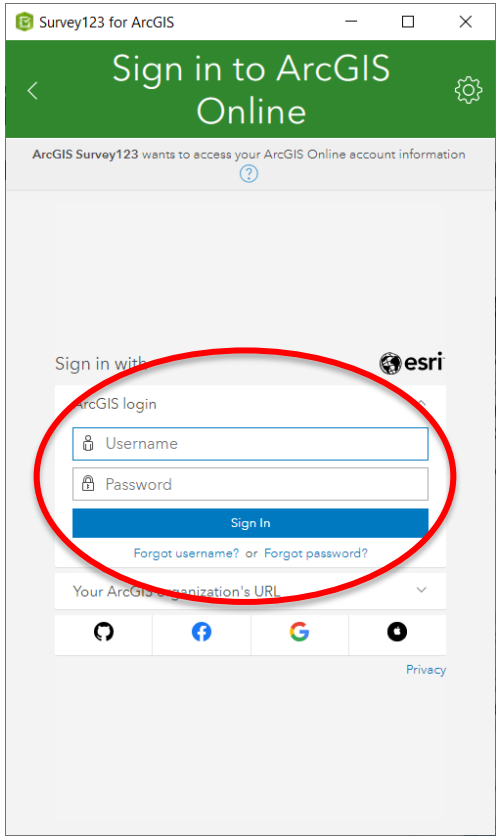
There are shared training areas for the different INSARAG regional groups or special events (**please contact IMWG**)

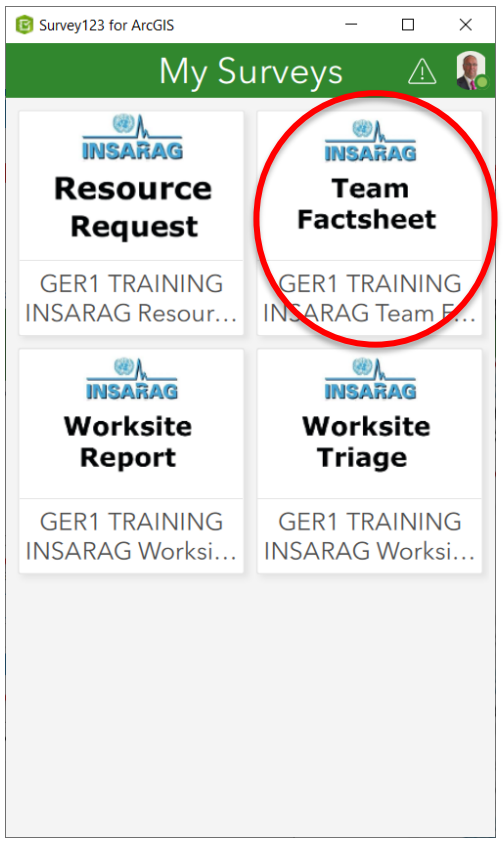
And below this, each country has an individual training site

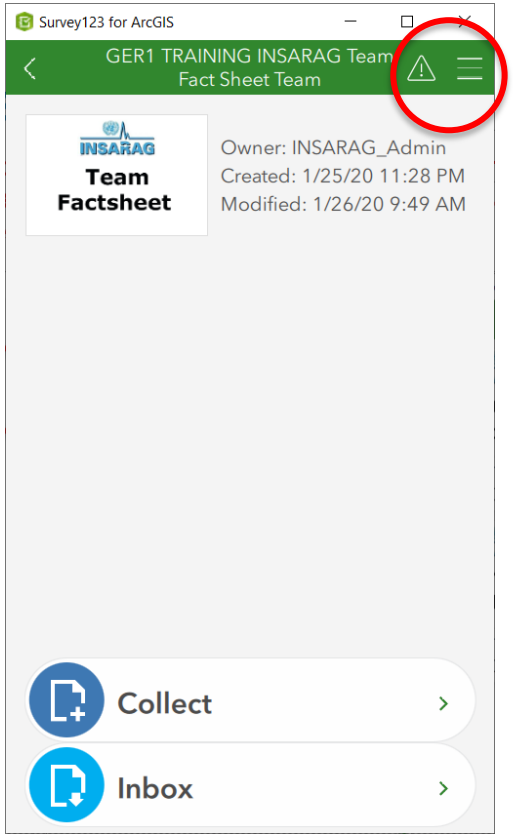
How to start Data Collection, first steps

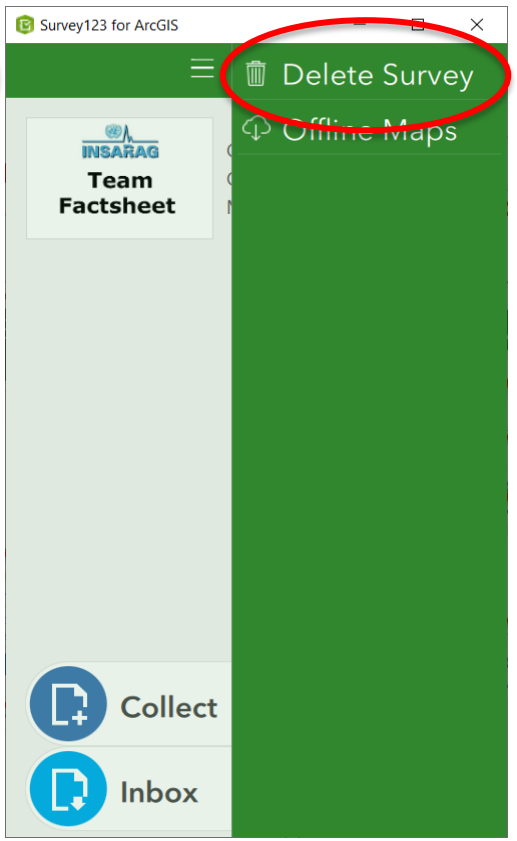
Before you download new surveys, it is very important that you delete any surveys already on the device.











This prevents team members using a form not allocated to the specific event and failing to send the information to the event dashboard

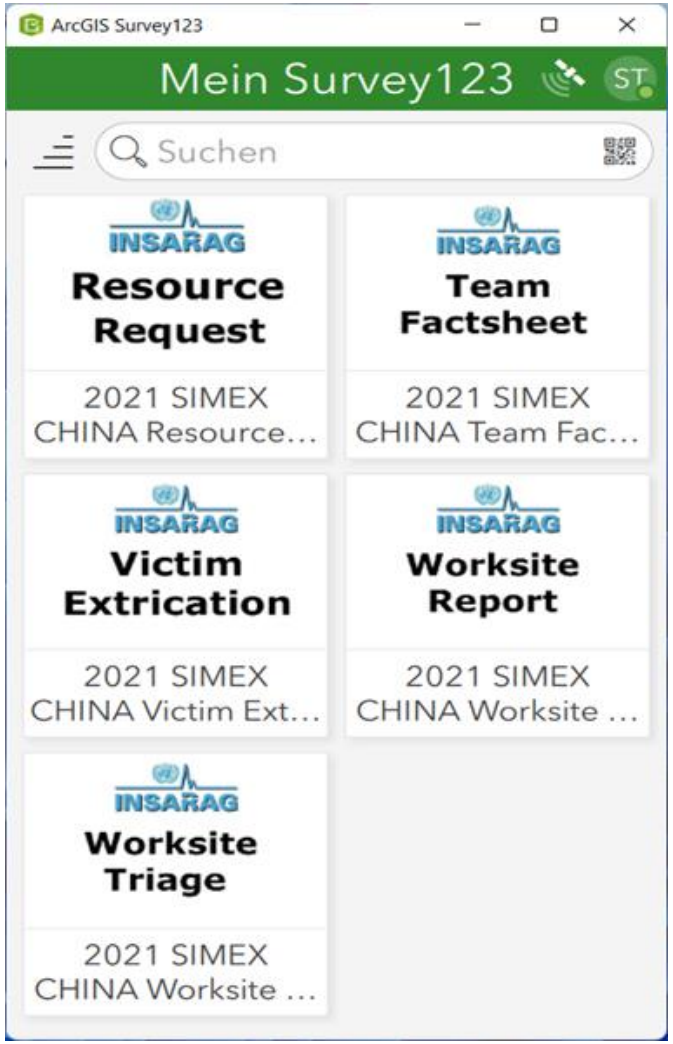
INSARAG FORMS

The below image describes the available INSARAG forms.

The Resource Request Form is completed by the **rescue team** in order to request materiel and Machines

The **Victim Extrication** form is completed whenever a victim is extracted from a worksite by the **rescue team.**

The **Worksite Triage** forms are completed by **rescue teams** during the recon phase and are used to determine where to commit rescue resources.



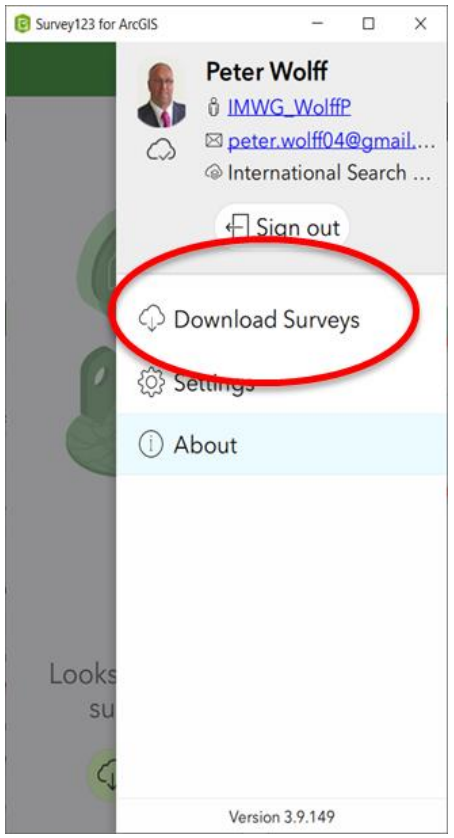
The **Team Factsheet** is completed at the start of a deployment by the **Team Management**

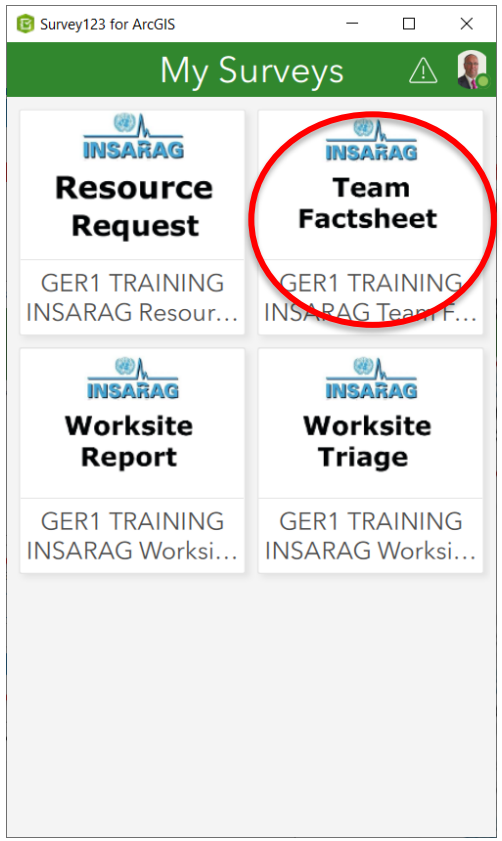
The **Team Demobilisation** is part of the Team Factsheet and used at the end of a deployment and completed by the **Team Management**

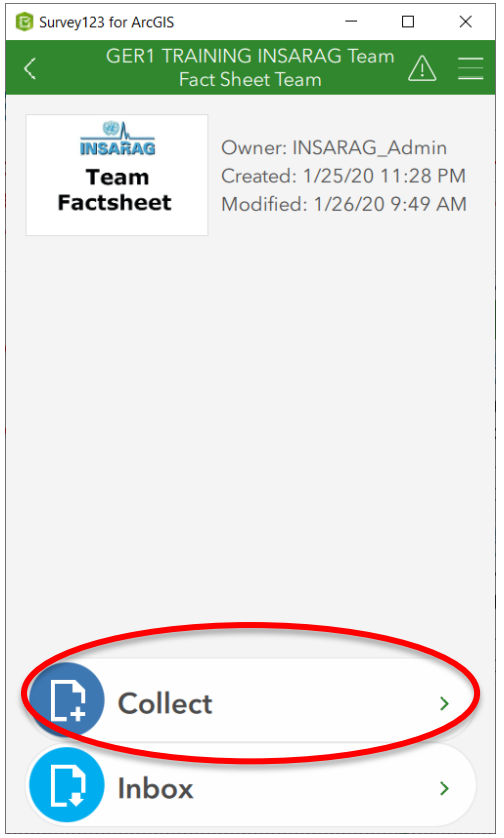
The **Worksite Report** form is completed at specified intervals to report on worksite progress by the **rescue team**.

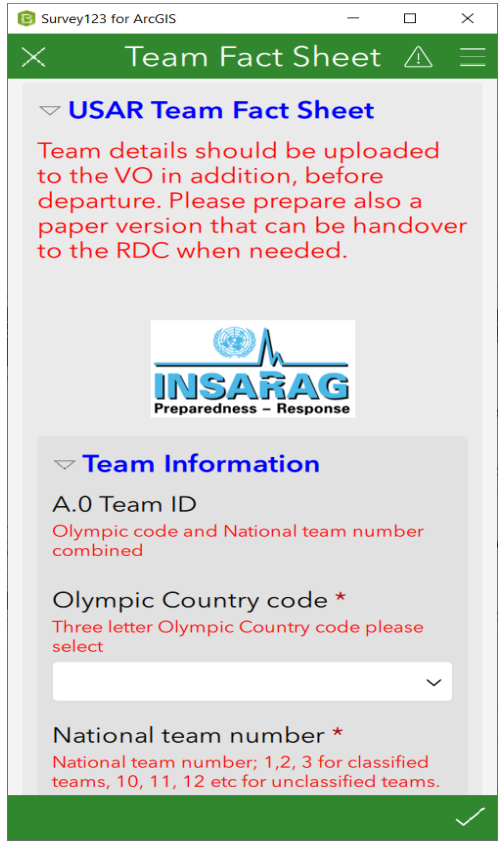
Data Collection

Before we can start collecting data we need to download the correct forms for this event







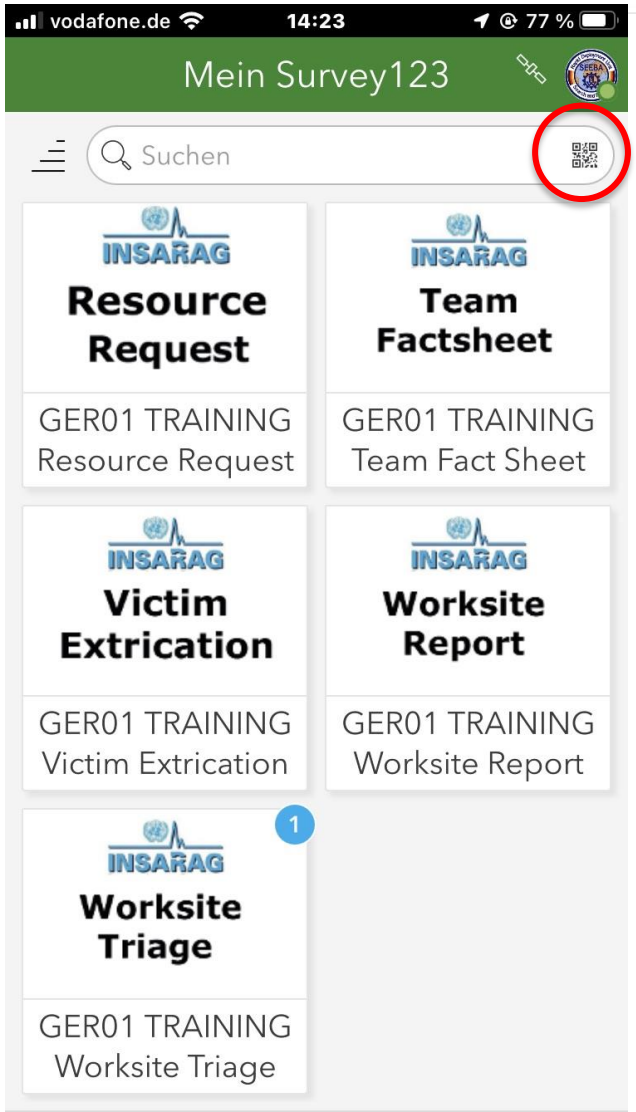


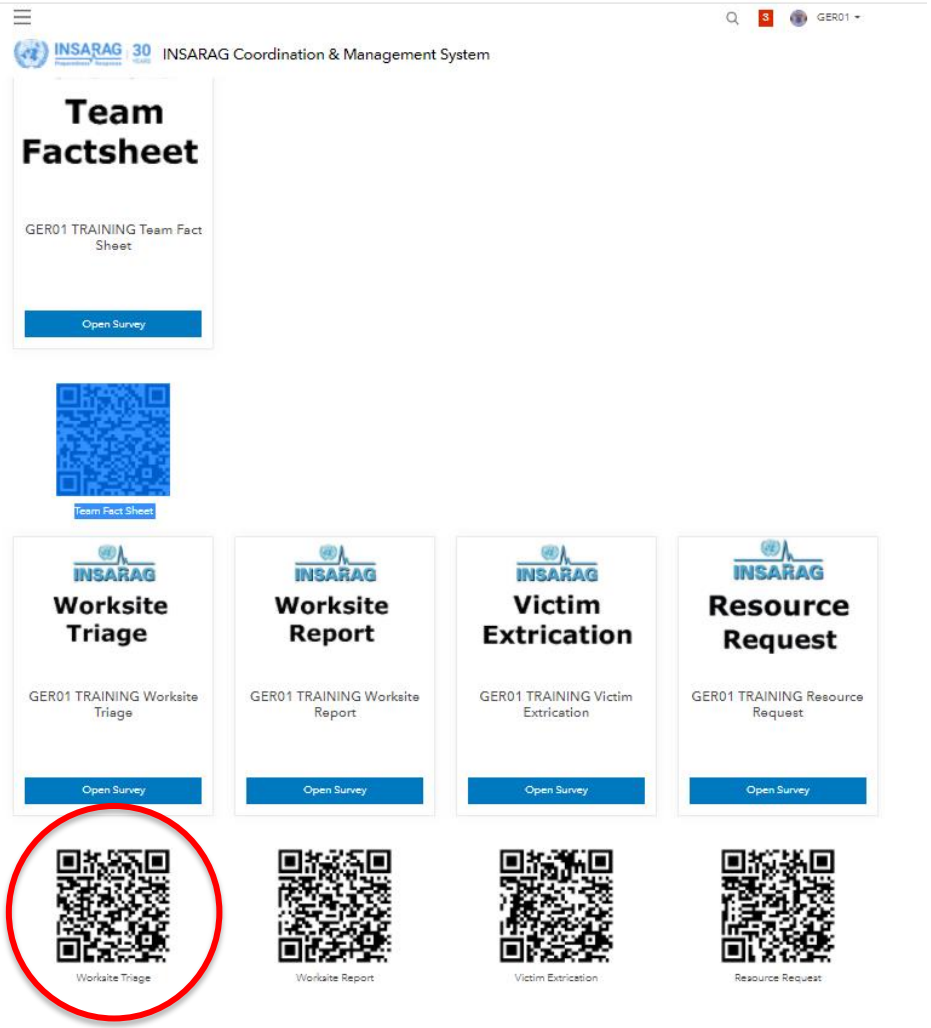
Ensure that each form has the correct title eg. ‘GER1 Training or the name of the specific deployment.

Data Collection

Teams should preferably the QR code functionality

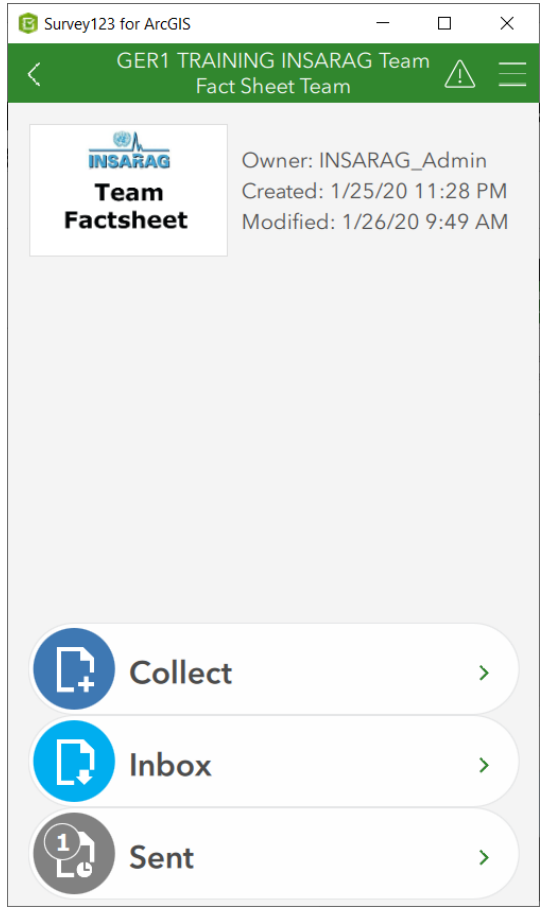
- Teams should preferably download the forms from the ICMS Team Hub via the QR code functionality
- Select the form you wish to download via the QR functionality from Survey 123
- You will find pre-filed Team information at the forms
- Complete the form as per normal





Data Collection

Once a form is completed, users can either reopen the submitted form to review, make changes or can create a new form to complete. It is also possible to Copy into a new one.



Fill into a form

Download all Team Files.

Reopen a previously submitted form.

Are there any Questions?
